

# Labelling of pallets

## Pallet labelling machine GU/PE2-RFID

The fully automatic labelling machine has been developed for the in-line labelling at the stop of the pallet.

The system can be installed left hand or right hand in flow direction of the pallet. The applicator is equipped with an automatic scan of the stroke position and can be adjusted to +90° or -90°.

So the labels can be applied to the front and the side or from the side to the back.

### Technical specifications:

- Basic frame of anodized aluminium
- Siemens S7 automatic control
- Barcode scanner
- Cycle time of approx. 16 seconds
- Easy operation
- High-performance printer with 64-bit processor
- Length of the ink ribbon: 1000 m
- Self-cleaning print head
- Automatic dot control
- Quick-change system without tools
- Economical use of the ink ribbon is standard
- RFID capability
